# For Quadra 840av Installation
## Use the Raven-840 Utility in this envelope to finalize the installation of your Raven-800

## MicroNet Raven-800 Disk Arrays Can Be Installed For Use With a Quadra 800 or Quadra 840av

- Congratulations on your purchase of a MicroNet Raven-800 disk array. By following the instructions below and referencing the Raven Disk Array Owner's Guide you will be able to easily install your new system.

- Since the Quadra 840av uses SCSI Manager 4.3 it is not possible to install device drivers on a Raven-800 disk array that are compatible with both the Quadra 800 and the 840av. The two drives in the system have been formatted and tested by MicroNet. They are not Partitioned/Initialized and device drivers installed for use as a Raven disk array. Please Note: MicroNet furnishes a specific Raven Utility for use with the Quadra 800 as well as a specific Raven Utility for the Quadra 840av.

- **After the disk drives have been connected, <u>with the NuPORT card installed in Slot D</u>, (the middle NuBus slot) you will need to use the enclosed Raven-840 Utility to finalize the installation.** First, boot the Quadra 840av from either an internal or external hard drive, or the floppy drive. Launch the MicroNet Raven-840 Utility. Select the Partition/ Initialize feature. Follow the instructions found on pages 58 and 72 of the Raven Disk Array Owner's Guide to partition or initialize the drives. After the drives have been initialized they will mount on the desktop. At this point you can copy files and applications to the Raven disk array.

- **Instructions For Moving a Raven-800 Disk Array to a Different Quadra.** Please refer to the instructions found on pages 12-14 of the Owner's Guide.
